

FOG-ceptor[®] Series

Test After Test, It Measures Up

Sewer backup is a real problem that affects more than just your business. When fats, oils, and grease (FOG) build up and harden inside of the sewer pipes, it causes overflow, fouling and pollution in the surrounding community. It's a stinky situation. One that costs in cleanup and fines.

That's why regulations are tightening and putting high expectations on the owner. So what's the solution?

FOG-ceptor Z50H

Breaking It Down...Literally

Many businesses are now required to achieve 99% removal efficiency. That means fats, oils and grease need to be better managed in order to keep sewer lines clear. The right interceptor, like Zurn's FOG-ceptor, captures FOG best, providing long-term peace of mind.

45 Tests and Counting

Our engineers worked with NSF, a well-recognized third-party certifier, to put our FOG-ceptor to the ultimate test.

For PDI G-101 certification, 15 sink dumps are required. In order to maximize performance, we used two Z250H FOG-ceptors in series. The systems surpassed 45 sink dumps, while continuously delivering over 99% FOG removal efficiency.

Zero Concern

The results add up in performance and cost savings. 45 sink dumps later with well over 99% efficiency, the FOG-ceptor delivers 100% peace of mind and compliance.

What's more? All systems are backed by a no-nonsense limited warranty, so our word is as solid as the design.

FOG-ceptor Z250H Single tank, meets PDI, CSA and IAPMO compliance

FOG-ceptor Z250H Double tank, meets Miami Dade Code compliance

FOG-ceptor Z75H Meets PDI G-101

FOG-ceptor Z50H Meets PDI G-101

FOG-ceptor Series

Two More Options. On the Double.

Every jobsite varies in challenges and capacity. To meet demand, we added two PDI-certified models to our line and shortened the turnaround time.

The FOG-ceptor family now includes a 50 GPM tank, 75 GPM tank and the original 100 GPM tank. All three dimensions remain stocked in our service centers. That way, you can expect a 24-48 hour order window. Find the FOG-ceptor that meets your project requirements and timeline.

Go with the Flow Rate

Why install a one-size-fits-all, when you can select an interceptor that truly fits the business? Find the FOG-ceptor to handle the flow rate of the operation.

FOG-CEPTOR	FLOW RATE
Z250H	100 GPM
Z75H	75 GPM
Z50H	50 GPM

High Quality, Low Concern

By design, the FOG-ceptor Series gives business owners peace of mind.

- Flexible system installs free standing, above ground, inside, outside, or can be buried in landscape or H-20 traffic-rated areas
- Multipurpose fiberglass frame and cover, H-20 rating for traffic areas, and slip-resistant ADA compliance make the series suitable for any in-building application
- Optional Smartpro™ Wireless RF monitoring system allows business owners and maintenance crew to remotely check grease, oil and sediment levels and temperature
